

Waste Management Policy

Excellence Logging is committed, as a central aspect of its overall environmental performance, to implement an efficient and safe waste management program. By **Risk Minimisation** and encouraging **relevant, adapted and suitable** Risk Control and Regulatory Compliance in our activities and product lifecycles we will monitor the critical risk controls, identify protective counter-measures or barriers, and prevent major incidents.

Our Goals are to comply with waste management legislation and all applicable rules and regulations; identify and minimize the quantity of waste generated through our activities; encourage re-use of products or recycling schemes whenever possible to reduce the environmental impact of waste disposal; ensure safe handling and storage of waste.

Company Management holds the responsibility to ensure the requirements of this policy are communicated, understood and applied. All employees, contractors, suppliers, consultants, and temporary staff working for Excellence Logging must respect this policy.

Our requirements are to not produce any more waste than necessary through the 3R concept (Reduce, Reuse, Recycle); dispose of waste in an environmentally acceptable manner; impede uncontrolled discharge of waste into the environment; provide all staff with the necessary awareness and training on waste management issues; use sustainable, reusable or recyclable means whenever technically and economically feasible.

Promoting waste management enables all of us to understand how to actively contribute and change behaviours. **Everyone** at all levels is encouraged to identify risks and opportunities. We are determined to provide the necessary resources to achieve our goals and will support initiatives for continuous improvement of the OMS.

John LECHNER
Chief Executive Officer
Excellence Logging
